Overview

This is an overview of Clearview's Clearview Remote Player. Very similar to our previous version but with a lot more tools for your convenience. This will go over the operation and capabilities of the software. This player allows you to convert and play all DAV files downloaded from your Clearview recorder. We have also added a feature that allows you to convert a video to snapshots as well as verify that the file is 100% DAV format. For more information on this application you can click the ? in the top right hand corner for the entire software manual.

Materials needed

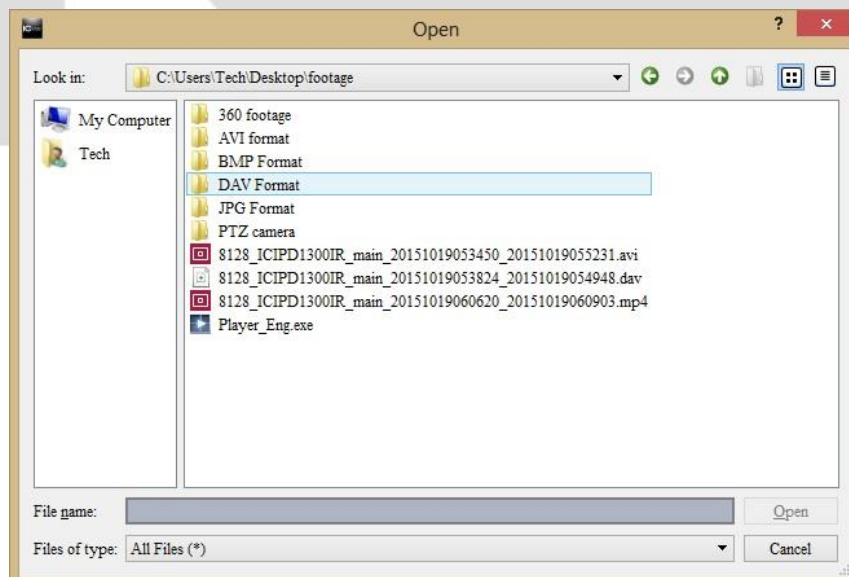

Windows PC
Recommend windows 7 or better.

The software interface

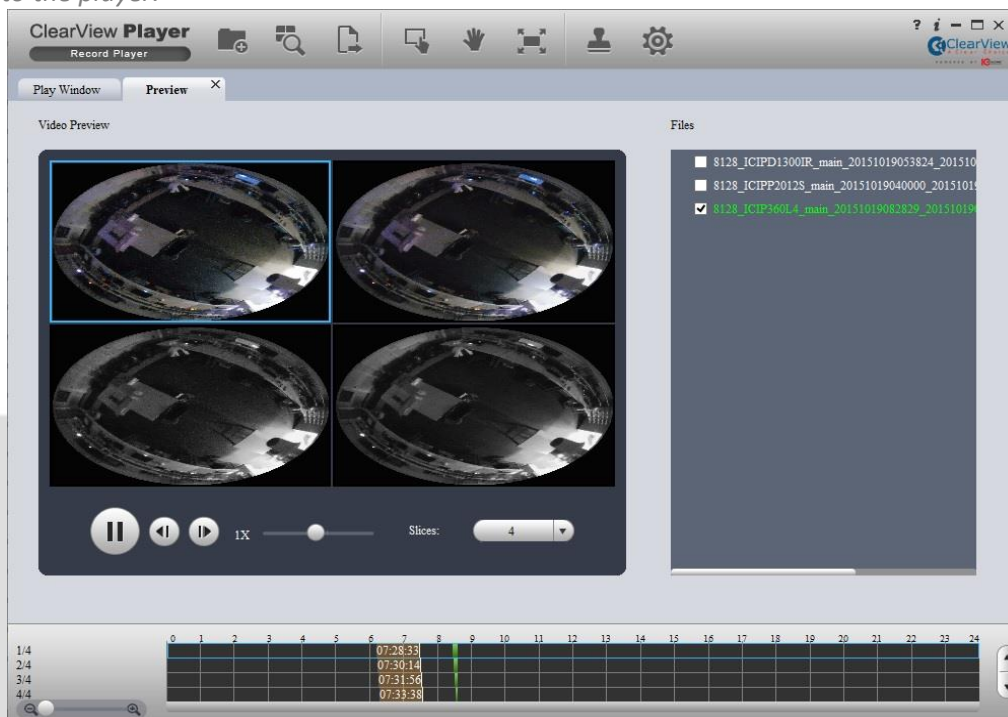

Step 1:

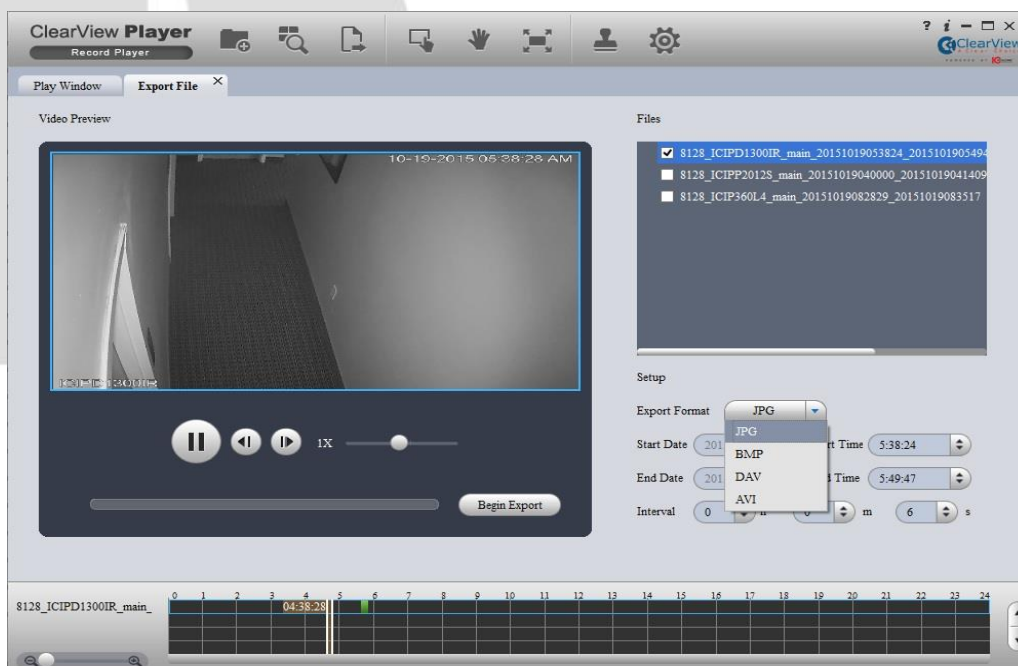

After your initial install of the software, you will arrive at this page after the program has been launched. You will see you are able to view as many videos as your PC will allow you to stream at once up to 36.

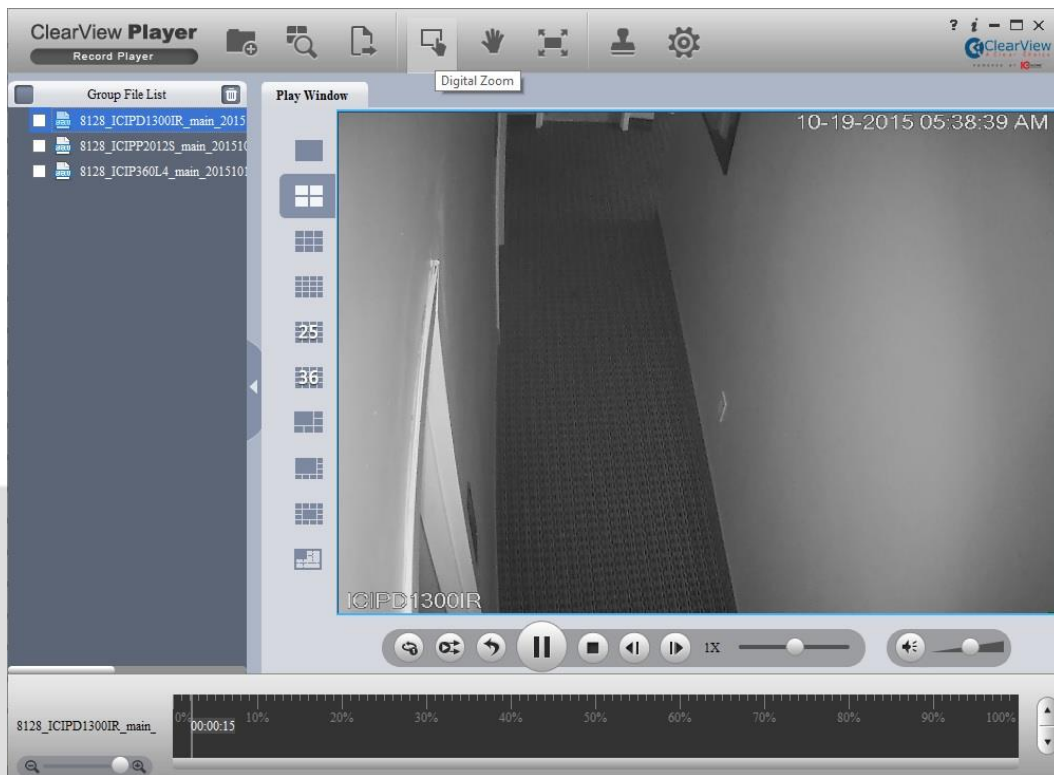

Step 2: When you click Add Files (the + over the folder symbol) on the right, this will allow you to add DAV files to the player.

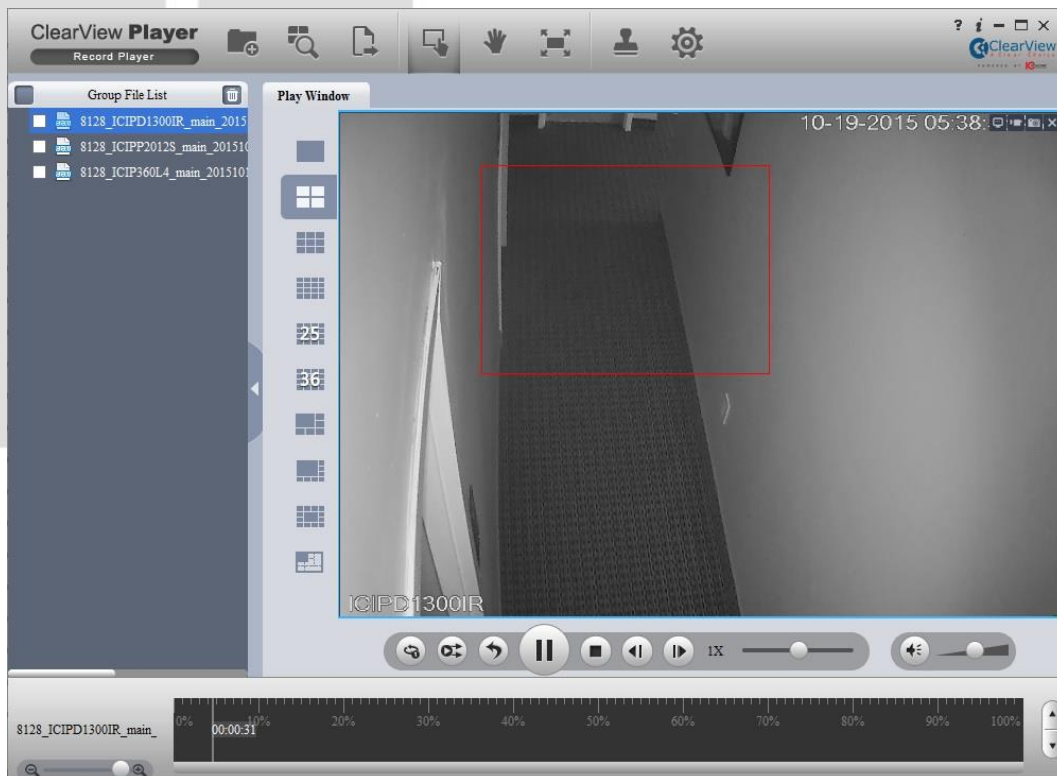

Step 3: Clicking the next icon (The magnifying glass) brings you to Preview. In this menu you will be able to select one video and view it in your chose of splits. This means that you can watch one video stream at different time intervals per square. Simply select the file on the right and select the split you would like and click play.

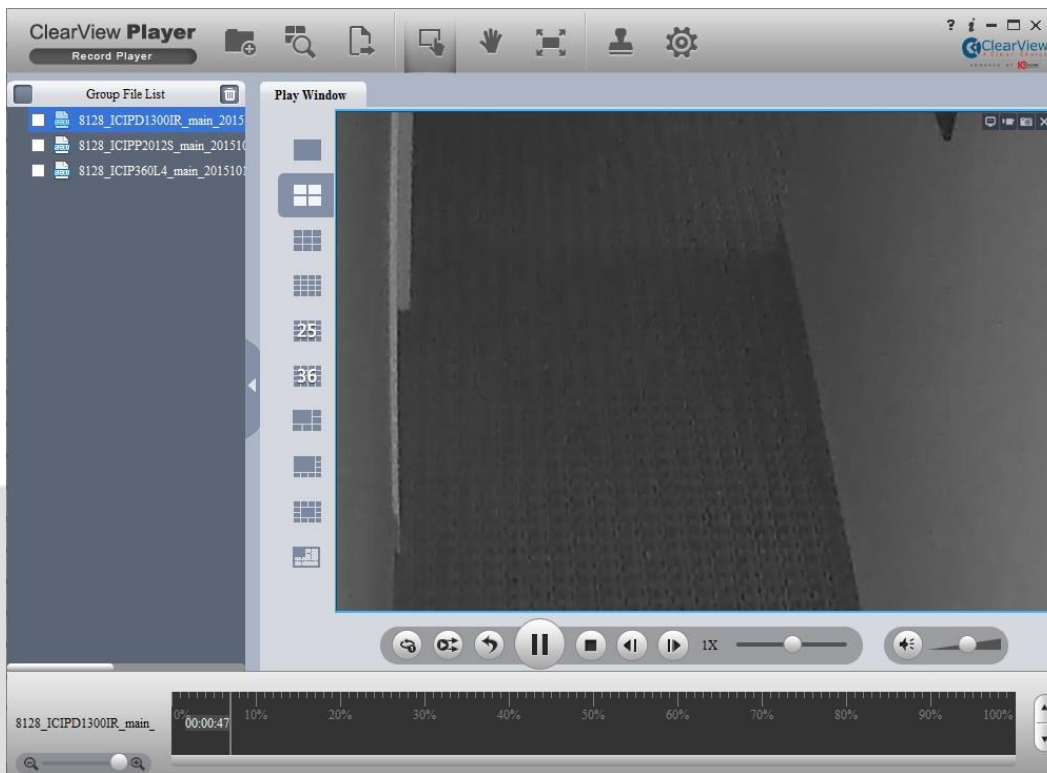

Step 4: The export tab or (Page Icon) allows you to convert the DAV files that you have downloaded to different video formats and into snapshots. You simply check the box of the file you want on the right and select the video format or snap shot interval and click begin export. That will prompt for a file location for you to save to and start the process.

Step 5: *Digital Zoom- While playing a DAV file in the Play Window you can click the digital zoom button to enable digital zoom on this player. This works just like on our recorders.*

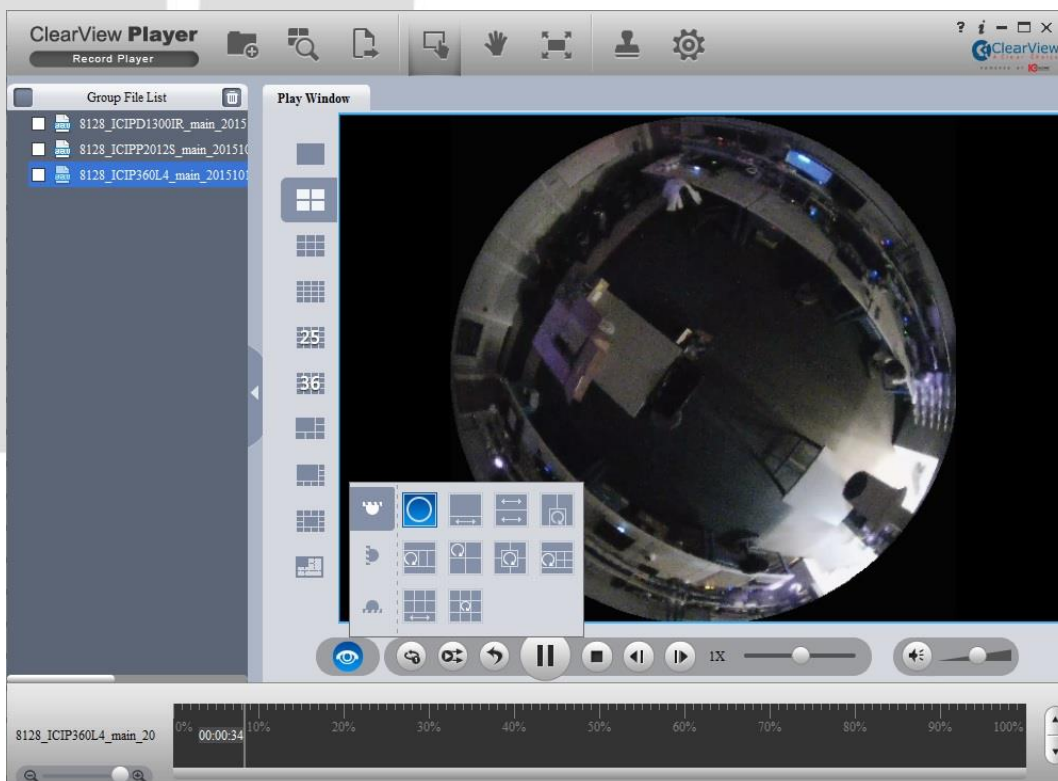

Step 5B: *Simply click and drag with the left mouse button like you would on our recorders.*

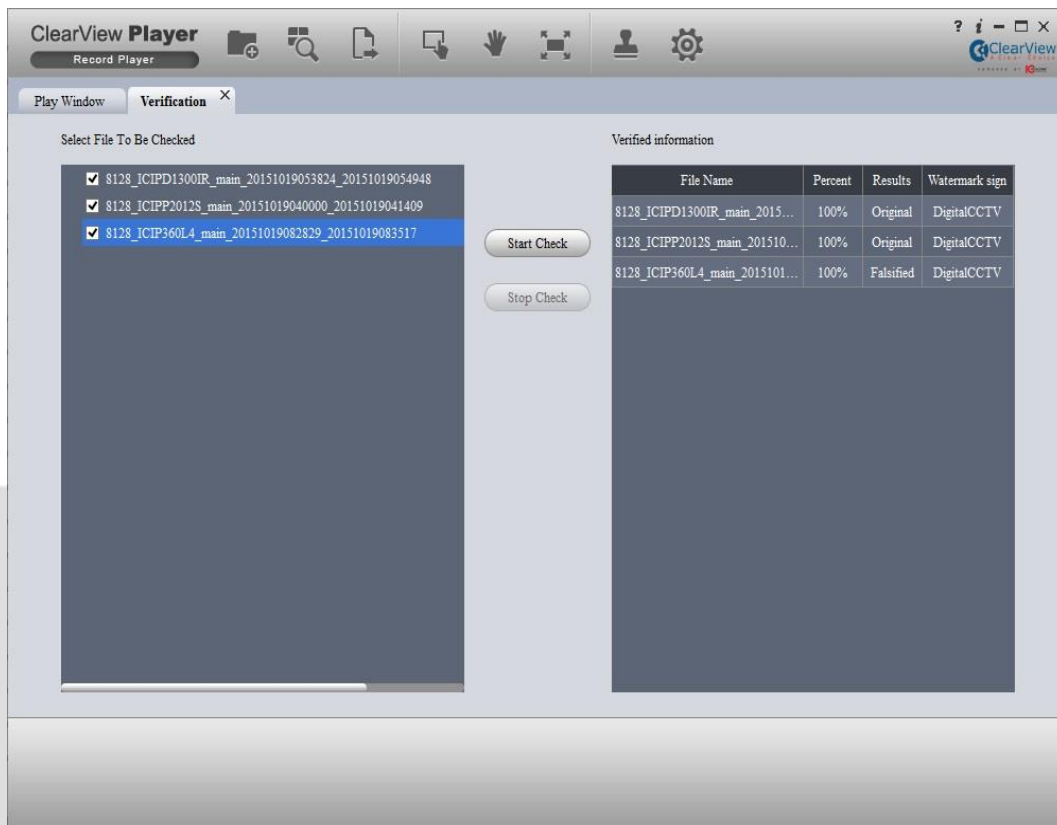

Step 5C:

Once you have zoomed in to the area that you selected, as you see here, then you can right click once to zoom back out to regular view of the video footage.

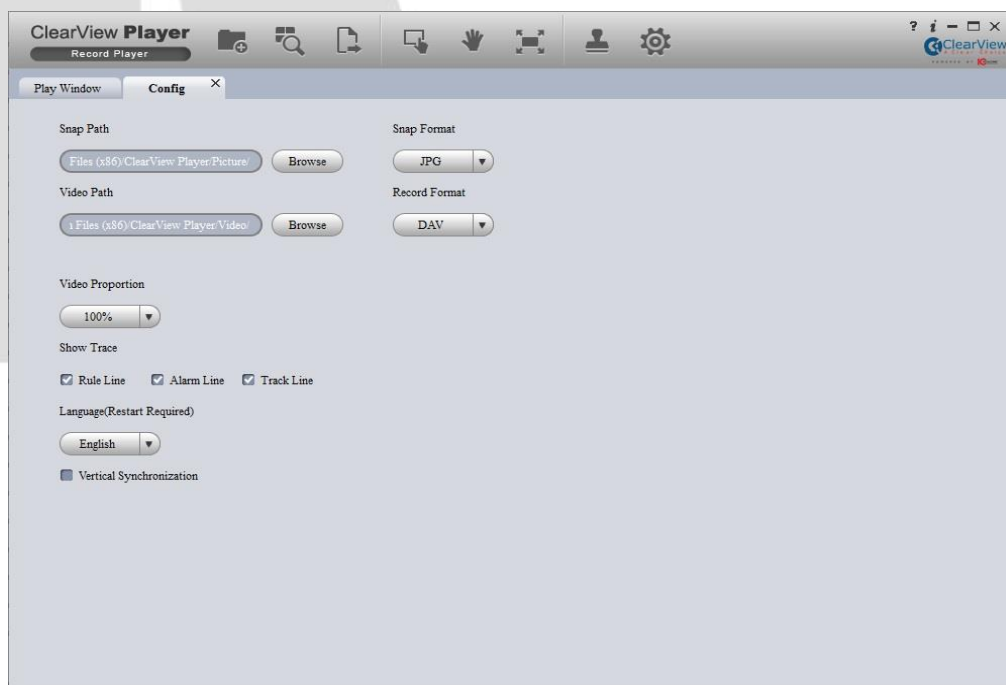

Step 5D:

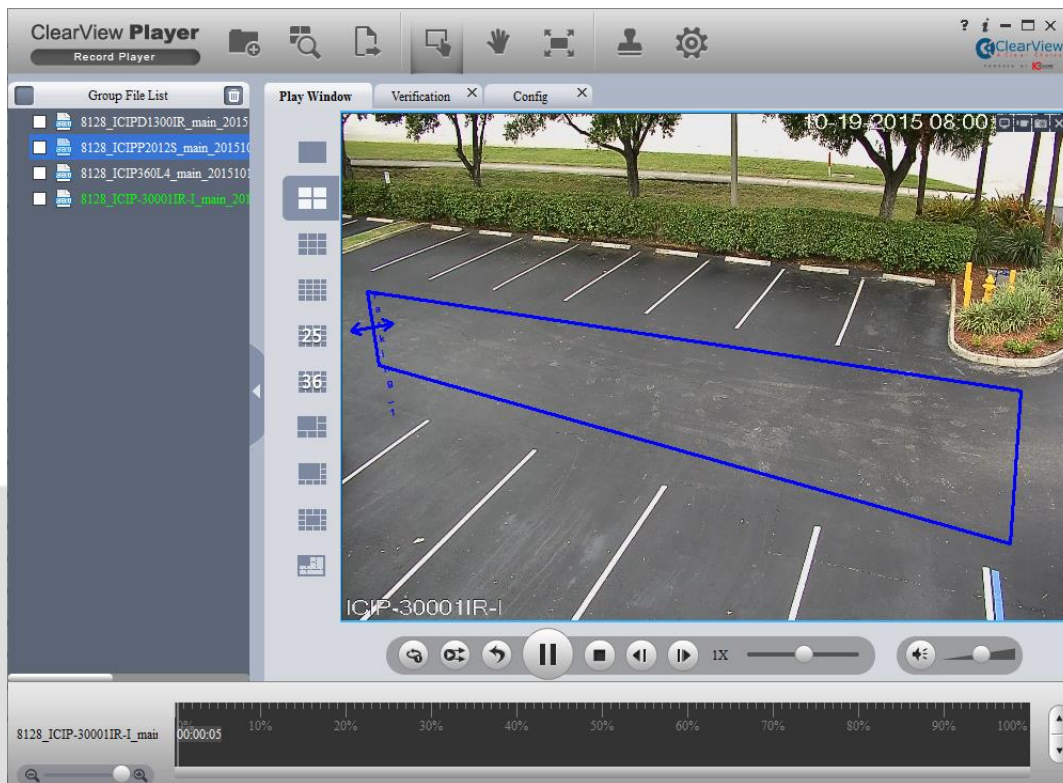

De-warping- Very similar to Clearview Remote, press the fish eye button to select the de-warp mode that you would like for the 360 DAV file you are watching. Select the installation mode, left side, then the view.

Step 6: *Verification-(The human icon) We have added the ability to for you to verify anyone's DAV files with this tool. As you can see here it will tell you falsified or Original when you select the files and click start check.*

Step 7: *Config-(The Gear wheel)- Here you can change the settings of this software and also enable the mode show trace. This is so that in live view you can see the settings you have made for our motion tracking cameras.*

Step 7B:

Above you can see the way live view will look when you enable the Show Trace.

Note: There is a lite version that does not have all these features that you will be able to download from Clearview Remote when you download footage.
